

InfoArmor understands the value of sensitive information so we continuously invest in securing data.

## How InfoArmor protects data within its network

InfoArmor builds and maintains a secure network by constantly testing and evaluating its safety measures.

We protect sensitive information with Advanced Encryption Standards.

InfoArmor proactively and rigorously manages systems and web applications for vulnerabilities.

InfoArmor implements strong access controls within its infrastructure.

InfoArmor's dedicated security team monitors 24/7 for anomalies.

## Data Center Security

InfoArmor's data center facility deploys twelve layers of security including mirrored windows, biometric vascular screening, ex-military armed security guards, and a custom mantrap with double-lockout technology and iris scanning.

The facility meets banking standards and has a team of 24/7 first responder engineers constantly monitoring all systems, networks, power, heating, cooling, natural disasters or other potential threats.
